Art Unit: 1743

## **DETAILED ACTION**

#### Election/Restrictions

Claims 11-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected Group II, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 6/28/07. The arguments presented are not persuasive because the Examiner has shown a proper restriction requirement seen in the Action dated 6/11/07.

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* **v.** *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Application/Control Number: 10/694,027

Art Unit: 1743

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over McGill et al. (US 2002/009603) in view of Zheng "X-ray Characterizations of Polyethylene Polyhedral Oligomeric Silsesquixane Copolymers" 10/24/01.

McGill teaches linear chemoselective carbosilane polymers the comprise a polymer matrix (polycarbosilanes) containing functional groups that interact preferentially with the target analyte through dipole-dipole, van der Waals, or hydrogen bonding forces. This matrix is incorporated in SAW devices where a sample interacts with the polycarbosilane matrix (para. 11). Hydrogen bond acidic groups are a type of functional group that is added to the matrix in which the hydrogen bond acidic group is a fluorinated phenol (para. 18, 40). The matrix detects hydrogen bond basic vapors, such as organophosphorus compounds, and also for nitroaromatic materials (para. 58, 60).

McGill does not teach a solid particulate filler dispersed in the polymer matrix.

Zheng teaches the use of polyhedral oligomeric silsequioxane (POSS) nanoparticles polymerized with copolymers to create new stable polymer. The copolymers employed are polysilixane. POSS containing copolymers have higher mechanical and thermal properties that the polymers without POSS side units (page 2375). Therefore, it would have been obvious to one having an ordinary skill in the art at the time of the invention to modify McGill to employ POSS as the particulate filler to increase the mechanical and thermal properties of the polymer matrix. Regarding claim 4, it would have been obvious to one having an ordinary skill in the art to modify McGill

Application/Control Number: 10/694,027

Art Unit: 1743

to employ an inert filler such as clay or glass fiber because this would make the polymer matrix stable and not have side reaction with the sample of interest.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Samuel P. Siefke whose telephone number is 571-272-1262. The examiner can normally be reached on M-F 7:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill A. Warden can be reached on 571-272-1700. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
